

SWISSLAB

Transfusion Medicine

Donation and production

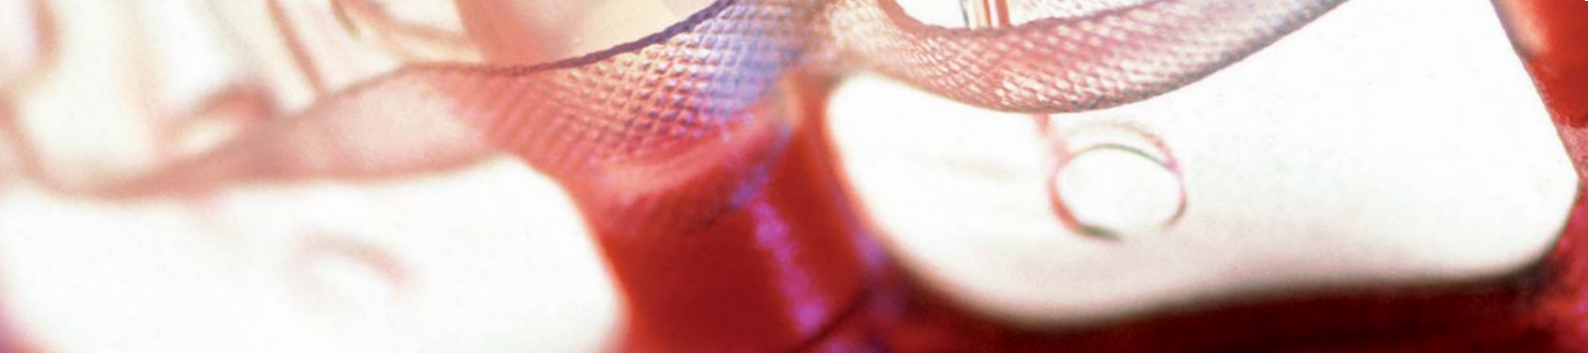

The SWISSLAB transfusion medicine module for donation and production was developed specifically for the complex and demanding processes which take place in this sensitive area of the laboratory.

The SWISSLAB system's user-friendly dialogues make it possible to conduct as well as monitor all of the highly specific procedural steps of a blood donation centre in a rapid and precise manner.

All transfusion laboratories working with the SWISSLAB system comply with Eurocode standards. In addition, this SWISSLAB module simplifies adherence to the demanding requirements of the international "Human Blood Transfusion Standards".

swisslab

Your benefits at a glance

User-interface controlled guidance through the donation procedure

- Automated creation and evaluation of donor questionnaires
- Inspection of donation suitability, approval and eligibility

Automated laboratory order generation

- Conducted orders individually according to donor status, donation type and donation method
- Order generation for core laboratory, microbiology and infection serology

Donation monitor for tracking steps in the donation process

- Customer definable monitor stages
- Detailed dialogues for recording the parameters

Workflow process monitoring

- Customer definable testing and inspection parameters
- Monitoring of production, testing, and clearance steps

Customer definable blocking parameters

- Manually and automatically, temporary or indefinite
- For donors, donations, and products

Documentation of blood products production

- Complete and consistent documentation of all steps in the production process
- Creation of all protocols required to meet regulatory requirements

Online data transfer

- Online connections for centrifuges and mixing scales
- Connection to variety of analysers
